

View

The current calendar view.

Usage

```
Set_Property(OLECtrlEntId, "OLE.View", OptionValue)
```

Values

OptionValue can be set to one of the following valid options:

Value	Abbr.	Description
Day	D	The single day view
WorkWeek	WW	The Mon-Fri side-by-side view with each day as a column.
FullWeek	FW	The full week side-by-side view with each day as a column.
Week	W	The full week view with each day as a box.
Month	M	The full month view.
TimeLine	TL	The time line view

Default: Day

Remarks

The View property sets the currently active calendar view. The SRP Calendar Control already comes with a navigation bar, so you don't have to use this property. However, in the event you need to programmatically change the view, this is the property for you.

Example

```
// Switch to Month view
Set_Property(@Window:".OLE_CALENDAR", "OLE.View", "Month")

// Switch to work week view using abbreviation
Set_Property(@Window:".OLE_CALENDAR", "OLE.View", "WW")
```
