SRP_Path Exists

Determines if the path points to an existing file or directory.

Syntax

```
Result = SRP_Path("Exists", Path)
```

Parameters

Parameter	Description
Path	A path without command line parameters.

Returns

1 if the path is well formed and points to an actual directory or file.

Remarks

The Exists service informs you if the path is pointing to something valid.

Example

```
Result = SRP_Path("Exists", "C:\Windows")
```

Hopefully this returns 1, otherwise you have Windows in a weird place or something is seriously broken.
