

SRP_Path GetDirectory

Extracts the entire path except the last component.

Syntax

```
Directory = SRP_Path("GetDirectory", Path)
```

Parameters

Parameter	Description
Path	A path with or without command line parameters.

Returns

The directory portion of the path.

Remarks

The GetDirectory service extracts the entire path except the last component. The directory will be returned *with the backslash at the end*. If Path already ends with a backslash, then the whole path is returned because a path ending in a backslash is assumed to be a directory.

Note. This method supports paths that contain command line parameters. In this case, command line parameters are simply ignored.

Example

```
Path = "C:\path1\path2\path3\filename.txt"
Result1 = SRP_Path("GetDirectory", Path)
Result2 = SRP_Path("GetDirectory", Result1)
Result3 = SRP_Path("GetDirectory", SRP_Path("RemoveBackslash", Result2))
```

Result1 and Result2 will both be "C:\path1\path2\path3\". Result3 will be "C:\path1\path2\".
