

SRP_Path IsDirectory

Determines if the path points to a valid directory.

Syntax

```
IsDirectory = SRP_Path("IsDirectory", Path)
```

Parameters

Parameter	Description
Path	A path without command line parameters.

Returns

1 if the path points to a valid directory, 0 if the directory doesn't exist or the path points to a file.

Remarks

The IsDirectory service is much like the [Exists](#) service, except that it returns 0 if the path points to a file. This only returns 1 if the path points to a valid directory.

Example

```
Result1 = SRP_Path("IsDirectory", "C:\Windows")
Result2 = SRP_Path("IsDirectory", "C:\Windows\system.ini")
```

Result1 will be 1. Result2 will be 0.
