

# SRP\_Path IsNetworkPath

Determines if the path points to a remote network directory.

## Syntax

```
IsNetworkPath = SRP_Path( "IsNetworkPath", Path)
```

## Parameters

Parameter	Description
Path	A path without command line parameters.

## Returns

1 If the path points to a valid network directory.

## Remarks

The IsNetworkPath service determines if the directory is both valid and resides on a remote drive.

## Example

```
Result1 = SRP_Path( "IsNetworkPath", "C:\Windows" )
Result2 = SRP_Path( "IsNetworkPath", "W:\MyRemoteDirectory" )
```

Result1 will be 0. Result2 will be 1, assuming the W:\ drive is mapped to a remote drive.
