

# SRP\_Path IsDirectoryEmpty

Determines if the path points to a valid directory with no files.

## Syntax

```
IsDirectoryEmpty = SRP_Path("IsDirectoryEmpty", Path)
```

## Parameters

Parameter	Description
Path	A path without command line parameters.

## Returns

1 If the path points to a valid directory with no files.

## Remarks

The IsDirectoryEmpty service determines if the directory is both valid and devoid of any files. This includes invisible system files. So, even if a directory appears empty in Windows Explorer, this will return 0 if there are *any* files whatsoever in the directory.

## Example

```
Result1 = SRP_Path("IsDirectoryEmpty", "C:\Windows")
Result2 = SRP_Path("IsDirectoryEmpty", "C:\MyEmptyDirectory")
```

Result1 will be 0. Result2 will be 1, assuming it is truly empty.
