

SRP_Path IsSameRoot

Determines if both paths share the same root.

Syntax

```
IsSameRoot = SRP_Path("IsSameRoot", Path1, Path2)
```

Parameters

Parameter	Description
Path1	A path without command line parameters.
Path2	A path without command line parameters.

Returns

1 If both paths share the same root, 0 otherwise.

Remarks

The IsSameRoot service determines if the two path share the same root. This is useful to checking to see if two paths point to the same drive.

Example

```
Result = SRP_Path("IsSameRoot", "C:\Windows", "C:\Users")
```

Result will be 1.
