# SRP_Path IsSystemFolder

Determines if the path points to a system folder.

## Syntax

```
IsSystemFolder = SRP_Path("IsSystemFolder", Path)
```

## Parameters

| Parameter | Description |
|---|---|
| Path | A path without command line parameters. |

## Returns

1 If the path points to a folder with the System attribute.

## Remarks

The IsSystemFolder service determines if the path points to a folder with the System attribute. These are folder that appear dimmed in Windows Explorer. Folders that are not dimmed, never return 1 with this call. For example, C:\Windows is not a system folder. It contains critical system files, for certain, but the folder does not have the System attribute.

## Example

```
Result1 = SRP_Path("IsSystemFolder", "C:\Windows")
Result2 = SRP_Path("IsSystemFolder", "C:\Users\Johnny Appleseed\AppData")
```

Result1 will be 0. Result2 will be 1.
