

SRP_Path MakeRelative

Makes a path relative to another path.

Syntax

```
NewPath = SRP_Path("MakeRelative", PathFrom, PathTo)
```

Parameters

Parameter	Description
PathFrom	A path without command line parameters.
PathTo	A path without command line parameters.

Returns

The first path reformatted to be relative to the second path.

Remarks

The MakeRelative service reformats the path passed into PathFrom to make it relative to the path passed into PathTo. This can return an absolute path if the second path has a different root. **IMPORTANT:** If you do not use a backslash at the end of your first path, then the last component will be treated as a file.

Example

```
Result1 = SRP_Path("MakeRelative", "C:\Windows\", "C:\Windows\System32\")
Result2 = SRP_Path("MakeRelative", "C:\Windows", "C:\Windows\System32")
```

Result1 will be ".\System32\". Result2 will be ".\Windows\System32".
