

SRP_Path RemoveBackslash

Removes a trailing backslash if there is one.

Syntax

```
NewPath = SRP_Path("RemoveBackslash", Path)
```

Parameters

Parameter	Description
Path	A path without command line parameters.

Returns

The path without a backslash at the end.

Remarks

The RemoveBackslash service checks the end of the given path, taking whitespace into account, and returns a new path with a backslash removed if necessary.

Example

```
Result1 = SRP_Path("RemoveBackslash", "C:\Path")  
Result2 = SRP_Path("RemoveBackslash", "C:\Path\")
```

Both Result1 and Result2 will contain "C:\Path".
