

SRP_Path AddBackslash

Adds a backslash to the end of a path if there isn't one.

Syntax

```
NewPath = SRP_Path("AddBackslash", Path)
```

Parameters

Parameter	Description
Path	A path without command line parameters.

Returns

The path with a backslash at the end.

Remarks

The AddBackslash service checks the end of the given path, taking whitespace into account, and returns a new path with a backslash added if necessary.

Example

```
Result1 = SRP_Path("AddBackslash", "C:\Path")  
Result2 = SRP_Path("AddBackslash", "C:\Path\")
```

Both Result1 and Result2 will contain "C:\Path\".
