

# SRP Tree Control

The **SRP Tree Control** brings the long awaited tree control to OpenInsight. In addition to providing true tree control functionality to OpenInsight, the SRP Tree Control offers a wide range of features designed to ease the programming task.

Unlike the OpenInsight hierarchical list box, which is nothing more than a linear list of indented items, the SRP Tree Control implements a true hierarchy. But that is only the beginning. The SRP Tree Control supports check boxes, word wrapping, check boxes, custom themes, and more.

Check out the How To articles to learn how to embed the SRP Tree Control in your application.
