

# SetSelfURL

Sets the self URL for the current service.

## Syntax

```
Response = HTTP_Services('SetSelfURL', SelfURL)
```

## Returns

N/A

## Parameters

Parameter	Description
SelfURL	The self URL relevant to the current service. <b>Required</b>

## Remarks

The self URL is the URL that identifies itself. It is typically returned in responses to serve as a self-referencing ID apart from other URLs that might be returned which direct the caller to other services.
