

# SetOECGIRequest

Sets the HTTP request that the OECGI creates to memory so it can be retrieved by later routines. This avoids the need to pass this around into various routines.

## Syntax

```
Response = HTTP_Services('SetOECGIRequest', Request)
```

## Returns

N/A

## Parameters

Parameter	Description
Request	The @FM delimited array containing the HTTP request that OECGI passes in. <b>Required.</b>

## Remarks

This is used by the [HTTP\\_MCP](#) controller to store the @FM array from the OECGI into memory. There is no reason to use this service elsewhere.
