GetOECGIRequest

Returns the original HTTP request that the OECGI creates.

Syntax

```
Response = HTTP_Services('GetOECGIRequest')
```

Returns

The @FM delimited array that the OECGI sends in.

Parameters

N/A

Remarks

Normally this information will not be needed by a web service routine since all of the content will have already been parsed and will be better accessed via specific services (e.g., *GetHTTPValue*).
