SetResponseBody

Sets the body content to be returned in the response.

Syntax

```
Response = HTTP_Services('SetResponseBody', Body, IsBinary, ContentType)
```

Returns

N/A

Parameters

Parameter	Description
Body	The full body to send back with the HTTP response. **Required.**
IsBinary	Flag to determine if the response body is binary data. If empty then the body content will be examined to make an educated guess. **Optional.**
ContentType	Value to set for the response header Content-Type. **Optional.**

Remarks

This is the service that will most likely be used by web service routines to identify the content that should be returned.
