

SetOECGIRequest

Sets the HTTP request that the OECGI creates to memory so it can be retrieved by later routines. This avoids the need to pass this around into various routines.

Syntax

```
Response = HTTP_Services('SetOECGIRequest', Request)
```

Returns

N/A

Parameters

Parameter	Description
Request	The @FM delimited array containing the HTTP request that OECGI passes in. Required.

Remarks

This is used by the [HTTP_MCP](#) controller to store the @FM array from the OECGI into memory. There is no reason to use this service elsewhere.
