

SetRequestHeaderField

Sets the indicated Request Header Field with the indicated value.

Syntax

```
Response = HTTP_Services('SetRequestHeaderField', Name, Value)
```

Returns

N/A

Parameters

Parameter	Description
Name	Header Field Name to set. Required.
Value	Value for the header field. This will be Trimmed to enforce proper formatting. Required.

Remarks

HTTP request header field values can be retrieved with a [GetRequestHeaderField](#) service call so that server processing can operate accordingly.
