GetResponse

Gets the full response, headers and body, to be returned to the HTTP request.

Syntax

```
Response = HTTP_Services('GetResponse')
```

Returns

An HTTP response payload, inclusive of the status code, phrase, and headers.

Parameters

N/A

Remarks

This will build the response as needed by OECGI, especially regarding binary data handling. This is used in the HTTP_MCP *controller* and should not normally be used anywhere else.
