

# CellToolTip

Enables or disable's a cell's tooltip.

 Added in 4.1.20

## Usage

```
Set_Property(OLECtrlEntID, "OLE.CellToolTip[field; record]", Boolean)
```

## Values

[True | False]

**Default:** True

## Indices

Index	Description
field	Index to an existing field
record	Index to an existing record

## Remarks

The CellToolTip property provides a way to enable or disable the tooltip that appears when a cell's contents don't fit within the cell. If you want to disable the tooltips for the whole table, use [ShowToolTips](#) instead. This is useful if you have a specific row or column whose tooltips you don't want displayed.

## Example

```
// Turn off tooltips for column 1
Set_Property(@Window:".OLE_EDITTABLE", "OLE.CellToolTip[1; All]", 0)
```
