

Accessing the MFS

Once an MFS has been properly installed and the file attached, access to an MFS is automatic. Anytime an BASIC+ [READ](#), [WRITE](#), [DELETE](#) or other record-oriented statement is made, or anytime a System Monitor command such as [ATTACH_TABLE](#) or [Read_Row](#) is made, BASIC+ will automatically pass the appropriate arguments to the MFSs and the BFS for the file being accessed.
