

READO.RECORD

Purpose

Used to read a record that will not be updated (read only). This code is provided for filing systems that might use buffers to store records already read.

In an MFS, this code is typically implemented in the same manner as a [READ code](#), with all arguments passed through to subsequent filing systems as if the code were [READO.RECORD](#).

Arguments

Argument	Input/Output	Value
CODE	Input	2
	Output	unchanged
BFS	Input	BFS List
	Output	unchanged
HANDLE	Input	file handle
	Output	unchanged
NAME	Input	record key
	Output	unchanged
FMC	Input	unassigned
	Output	unchanged
RECORD	Input	current value of @RECORD
	Output	record read from file (null if no record found)
STATUS	Input	unassigned
	Output	true if record was read successfully
