FLUSH

Purpose

Used to alert all filing systems to flush any caches or buffers, or to execute other cleanup processes.

Arguments

Argument	Input/Output	Value
CODE	Input	21
	Output	unchanged
BFS	Input	MFS name
	Output	unchanged
HANDLE	Input	null
	Output	unchanged
NAME	Input	null
	Output	unchanged
FMC	Input	null
	Output	unchanged
RECORD	Input	null
	Output	unchanged
STATUS	Input	null
	Output	unchanged

> ⓘ When this code is called, the system makes individual calls to all filing systems currently installed. The MFS should not attempt to pass this call to subsequent filing systems. Because this is a filing-system specific call, the BFS argument contains only the name of the current filing system.

Called by

BASIC+ Flush subroutine, at logoff, or when exiting from the debugger. Also called directly by certain processes such as indexing.
