

SRP_Regex

SRP_Regex provides services to easily parse or pattern match strings in OpenInsight.

Regex Patterns

A regex pattern is a mini-language unto itself that is often confusing to look at, even for those used to it. SRP_Regex uses the same syntax as Javascript, so your best bet is to find an online tool to help you craft and test your regex patterns. A great resource is [Regex101.com](https://regex101.com). Make sure to select ECMAScript (Javascript) as your regex flavor.

Regex is case sensitive. If you want case insensitivity, you implement it in the regex pattern itself.

Reference

Service	Description	Version Added
Extract	Extracts the first pattern match from a string.	2.2.3
ExtractAll	Extracts all pattern matches from a string.	2.2.3
Match	Determines if the entire string matches the given pattern.	2.2.3
