

Set Printer DUPLEX

Description

The DUPLEX message is used to set the duplex mode for the current printer. The Duplex is a value that is specified in the OIPRINT_EQUATES. Always check the return code from the DUPLEX message for errors, because not all printers support duplex printing.

With horizontal duplex printing, the top of both sides of the page are at the same end of the sheet. With vertical duplex printing, the bottom of one page is at the same end of the sheet as the top of the next page.

Syntax

```
errorStatus = Set_Printer( "DUPLEX", duplexType )
```

Parameters

Parameter	Comments	Default
duplexType	See OIPRINT_EQUATES 1= Simplex 2=Horizontal 3= Vertical

Example

```
* The following example shows how to use the DUPLEX message.  
declare function Set_Printer  
stat = Set_Printer("INIT") ;* Start printing  
stat = Set_Printer("DUPLEX", 2) ;* set duplex to horizontal  
if stat < 0 then  
  goto ErrorHandler ;* duplex is not supported  
end  
stat = Set_Printer("TERM") ;* End printing
```
