

Coding the WINMSG Event for Processing Mouse Events

In the [WINMSG event](#) for BUTTON_1, code a message to display when the right mouse button is clicked down when the focus is on BUTTON_1.

```
call msg(@window, 'Caught right mouse button click down on BUTTON_1')
```

In the [WINMSG event](#) for the window, code a message to display when the right mouse button is clicked down when the focus is on the window.

```
call msg(@window, 'Caught right mouse button click down event in the window!')
```
