

The TEST_LB Function

The **TEST_LB** function, called from the [CLICK event](#) of the **B_POPULATE** button, populates the list box. Create this function in the System Editor by copying the code below:

```
function test_lb(CtrlId, Event)

*declare all the subroutines and functions that are used
declare subroutine Set_Property, Send_Message, Repository
declare function Send_Message, Get_Property

*Tab character will be used as a separator
equ TAB$ to \09\

*Get the name of the window
winId = CtrlId [1, '.']

*Get the name of the control
ctrlName = CtrlId [col2()+1, \00\]

begin case

  case ctrlName = 'B_POPULATE'
    *populate list box with static tabbed content when button clicked
    content = ''
    content<1> = 'OpenInsight'
    content<2> = TAB$: 'Tech Notes'
    content<3> = TAB$:TAB$: 'Hierarchical List Boxes Part 1'
    content<4> = TAB$:TAB$: 'Hierarchical List Boxes Part 2'
    content<5> = TAB$: 'White Papers'
    content<6> = TAB$:TAB$: 'How to Get to the Web With OpenInsight'
    Set_Property(WinId: '.LB_H', 'LIST', content)

  end case

return 0
```
