

# Promoted Events in Action

Now it's time to see the magic happen. Do the following:

1. Once you have restarted OpenInsight, load the Form Designer and create a new form.
2. Add an **EDITLINE**, **PUSHBUTTON**, **RADIOBUTTON**, **EDITBOX**, **CHECKBOX** and finally another **EDITLINE**.
3. Double Click on the last **EDITLINE** and change it's name to **STATUSLINE**.
4. Save your form and then test run it. As you move between each control, the control type should be displayed in the **STATUSLINE** control.

Some examples of other promoted Events include:

- Pre or post save
- Pre or post write
- Default options key processing
- Trap additional events like Right Click
- Change the background color of the form that has focus.

The potential of promoted events is limited only by your imagination
