# Deploying Promoted Events

Promoted events are not automatically included in a runtime deployment. You must create an **Application Row** repository entity to ensure that your promoted events are deployed. Follow these steps to create the entry:

1. From the Application Manager menu, select **Entity, New**
2. Select **General** then Click **OK**.   The following window displays:

The **New Entity** window displays, as shown below. Select **Application Rows** as the **Type/Class** and then enter the following.

Entity Control: **SYSREPOSEVENTEXES:EXAMPLES_GOTFOCUS..OIWIN_**

> ⚠ The format of the new entity name is:
>
> a. the literal **SYSREPOSEVENTEXES**
>
> b. then a colon :
>
> c: then the ID you used when you copied your Promoted Event to **SYSREPOSEVENTEXES**, substituting underscores _ for the asterisks *

Title: **Promoted Got Focus Event**

Sub-Key: **EXAMPLES*GOTFOCUS..OIWIN***   (the record ID in **SYSREPOSEVENTEXES**)

The window should display as shown below:

Finally, click on **Accept** to save the repository entity.

Now your Promoted Event will be included in your runtime deployments. You will need to create an **Application Row** repository entity for each Promoted Event you create.
