

Coding the OK Button CLICK Event in the Zoom Window

Add the following procedural event handler for the [CLICK event](#) for the OK button in the ZOOM window.

```
Text = .eb_Text->TEXTVAL  
call End_Dialog(@window, Text)  
RETURN 0
```

The code above:

1. Gets the [TEXTVAL property](#) from the edit box control and assigns it to the variable Text (using short hand notation), and then
2. Calls [End_Dialog\(\)](#) and returns the variable **Text** to the calling window.
