

Labels

The labels defines for this control.

Usage

```
Set_Property(OLECtrlEntID, "OLE.Labels", Labels)
```

Values

@FM delimited list of labels.

Default: ""

Remarks

The Labels property defines all the labels for the control. A label is simply a name and a color. Appointments can then be associated with a predefined label for convenient classification. This property is an @FM delimited array, with each field containing two values:

Position	Name	Type	Description
<x, 1>	Name	Text	The name of the label, e.g., "Meeting" or "Personal Time Off"
<x, 2>	Color	Color	The label's color.

NOTE: Define your labels *before* you add your appointments.

Example

```
// Define two labels
Labels = ""
Labels<-1> = "Personal":@VM:"Blue"
Labels<-1> = "Urgent" :@VM:"Red"
Set_Property(@Window:".OLE_CALENDAR", "OLE.Labels", Labels)
```
