

CalendarList

The list of all Calendars.

Usage

```
Set_Property(OLECtrlEntID, "OLE.CalendarList", Calendars)
```

Values

@FM delimited list of Calendars

Default: ""

Remarks

The CalendarList property defines all calendars in this control. While this is just one Calendar control, it can display multiple calendars just like Outlook. Each calendar is @FM delimited and contains only two values:

Position	Name	Type	Description
<x, 1>	Key	Text	The unique key identifying this calendar.
<x, 2>	Name	Text	The calendar's name.

NOTE: You must define calendars *before* adding appointments.

Example

```
// Each employee gets their own calendar
Calendars = ""
Calendars<-1> = "EMP100":@VM:"John Doe"
Calendars<-1> = "EMP101":@VM:"Jane Doe"
Set_Property(@Window:".OLE_CALENDAR", "OLE.CalendarList", Calendars)
```
