URLRequiresAuthentication

Returns a boolean flag whether the indicated URL requires authentication or not.

Syntax

```
Response = HTTP_Services('URLRequiresAuthentication', URL)
```

Returns

Returns a boolean flag whether the indicated URL requires authentication or not.

Parameters

Parameter	Description
URL	A fully formed URL. **Required.**

Remarks

Uses the *GetNonAuthenticatedURLs* service to determine if the indicated URL requires authentication. Non-authenticated URLs are used for special situations such as OAuth redirects where trusted servers need to connect but cannot pass authentication credentials.
