

GetEnableLoggingFlag

Returns the enable logging flag setting.

Syntax

```
Response = HTTP_Services('GetEnableLoggingFlag')
```

Returns

A Boolean value indicating whether or not logging is enabled for this web application. This is used by the [CreateLogFile](#) service to determine if logging should be attempted.

Parameters

N/A

Remarks

It pulls this from [SRP_HTTP_FRAMEWORK_SETUP](#) <10>. Note: Only an explicit setting of *False* (0) will turn this flag off.
