

SetSessionID

Creates and sets a unique Session ID for the current HTTP Request/Response. This is used to stamp various logs.

Syntax

```
Response = HTTP_Services('SetSessionID')
```

Returns

N/A

Parameters

N/A

Remarks

The Session ID is created in the following format:

YYYY-MM-DD_HH-MM-SS_<*ProcessID*>

Process ID is created with the GetCurrentProcessID Windows API.
