

# SetOECGIProcErr

Sets the HTTP ProcErr that the OECGI creates to memory so it can be retrieved by later routines. This avoids the need to pass this around into various routines.

## Syntax

```
Response = HTTP_Services('SetOECGIProcErr', ProcErr)
```

## Returns

N/A

## Parameters

Parameter	Description
ProcErr	The text of the procedural error. <b>Required.</b>

## Remarks

This is used by the designated ProcErr handler (see [GetAbortedService](#)). There is no reason to use this service elsewhere.
