

EntityUnassigned

Flags an existing entity as containing unassigned appointments.

Usage

```
Set_Property(CtrlEntID, "OLE.EntityUnassigned", Value)
```

Values

[*True* | *False*]

Default: False

Remarks

The EntityUnassigned property determines whether or not an entity contains unassigned appointments. This causes those appointment to never scroll out of view. In other words, the appointments' start and end times are ignored.

Example

```
// Make the entity whose key is UNASSIGNED, unassigned  
Set_Property(@Window:".OLE_CALENDAR", "OLE.EntityUnassigned[UNASSIGNED]", 1)
```
