

# GetLogErrorsOnlyFlag

Returns the log errors only flag setting.

## Syntax

```
Response = HTTP_Services('GetLogErrorsOnlyFlag')
```

## Returns

Boolean setting that determines if only error responses (i.e., status codes of 4xx or 5xx) should be logged. This is used by the CreateLogFile service. Note: Only an explicit value of 0 (False) will disable logging. Any other value, including an empty value, will enable logging. This is used by the [CreateLogFile](#) service.

## Parameters

N/A

## Remarks

It pulls this from [SRP\\_HTTP\\_FRAMEWORK\\_SETUP](#) <13>. Note: Only an explicit setting of *False* (0) will turn this flag off.
