

SRP_Path GetTempPath

Returns the current user's temporary directory.

Syntax

```
TempPath = SRP_Path("GetTempPath")
```

Returns

The current user's temporary directory.

Remarks

Added in 2.2.6

The GetTempPath returns the temporary directory Windows has assigned to the current user. This is the same directory you would get when typing %TEMP% into Windows Explorer.

Example

```
TempPath = SRP_Path("GetTempPath")  
OSWrite "Hello, World!" to TempPath:"\hello.txt" then NULL
```
